

Software Analytics Canvas

Project: _____

1. Question

What is it that we want to know about the software / processes / usage / organization / etc.?

2. Data Sources

Which data can possibly answer our question? What information do we need?

3. Heuristics

Which assumptions do we want to make to simplify the answer to our question?

4. Validation

What results do we expect from our analysis, how are they reviewed and presented in an understandable way?

5. Implementation

How can we implement the analysis step by step and in a comprehensible way?

6. Results

What are the main insights from our analysis?

7. Next Steps

What follow-up actions can we derive from the findings? Who or what do we need to address next?
